To whom it may concern,

This is to confirm that Anadarko Petroleum Corporation uses tNavigator software developed by Rock Flow Dynamics for reservoir simulation, assisted history matching and uncertainty analysis for offshore conventional and onshore unconventional fields.

tNavigator helps us reduce simulation times significantly that enables us to perform uncertainty analysis and field development workflows in a much more efficient manner for project execution with success.

We are very pleased with the support provided by Rock Flow Dynamics and their responsiveness that helps us effectively collaborate.

Regards

Dr. Sathish Sankaran
